The first step is to understand how the stock market works. The stock market is a place where people buy and sell shares of companies. The price of a stock is determined by supply and demand. When more people want to buy a stock than there are shares available, the price of the stock goes up. When more people want to sell a stock than there are buyers available, the price of the stock goes down.

The problem with the stock market is that it is not a level playing field. The big banks and hedge funds have a huge advantage over individual

investors. They have more money, more information, and better access to the markets. They can manipulate the prices of stocks and make huge profits at the expense of individual investors.

If you want to build real wealth, you need to get out of the rigged game of investing and start investing in real assets. Real assets are things that have intrinsic value, such as real estate, gold, and silver. The value of real assets is not determined by supply and demand. It is determined by the underlying value of the asset.

Real estate is a great investment because it provides a number of benefits, including:

- **Rental income:** You can rent out your property to generate a steady stream of income.
- **Appreciation:** The value of real estate tends to appreciate over time, so you can make a profit when you sell your property.
- **Tax benefits:** You can deduct mortgage interest and property taxes from your income, which can save you money on your taxes.

Gold and silver are also good investments because they are safe haven assets. This means that they tend to hold their value during periods of economic uncertainty. Gold and silver are also a good hedge against inflation.

If you want to build real wealth, you need to get out of the rigged game of investing and start investing in real assets. Real assets are the key to financial freedom.

## Here are some tips for getting started with real estate investing:

- **Start small:** You don't need to buy a big property to get started. You can start with a small investment property, such as a single-family home or a duplex.
- **Do your research:** Before you buy any property, do your research and make sure you understand the market. Talk to other investors, read books, and attend workshops.
- **Get pre-approved for a mortgage:** This will help you know how much you can afford to borrow, so you can make an informed decision when you find a property.
- **Find a good real estate agent:** A good real estate agent can help you find the right property and negotiate the best possible price.
- **Be patient:** Real estate investing is a long-term investment. Don't expect to get rich quick. Be patient and let your investments grow over time.

If you follow these tips, you can get started with real estate investing and build real wealth for yourself and your family.
